

## Windborne Debris

The report identifies properties located in ASCE 7-designated Wind-Borne Debris Regions (WBDR)—areas with wind speeds capable of producing damaging debris during hurricanes or severe storms. It also indicates whether glazed openings (windows, doors) are protected or unprotected per ASCE standards. This information supports underwriters in assessing wind vulnerability, code compliance, and potential mitigation credits for structures in coastal and high-wind regions.

### Coverage Area

- US Coastal States

### Report Details

We enhance your data with attributes you can view, filter by and export:

- Needs Protection
- Wind Band
- In Windborne Debris Zone
- Within One Mile Debris Zone
